Pursuing Moral Dimensions of the Environment:
A Study of Islamic Tradition in Contemporary Iran*

ABSTRACT

With growing economic activity and urbanization, environmental problems have become one of Iran's most urgent challenges. Notably, the government has incorporated environmental measures into the country's five-year plans for the last two decades and has since developed elaborate scientific schemes accordingly to combat the problems. Nevertheless, serious environmental difficulties persist in every major city. Confronting these problems, the Iranian authorities began to call upon religious leaders for help and mobilized them to heighten citizens' environmental awareness, especially from the viewpoint of Islam. The movements and debates by these religious leaders elucidate how they engage with the field of environment, which had hitherto been principally defined and organized by modern science. A case study from Tehran exemplifies distinct ways in which moral dimensions of the environment are unfolding through religious ethics, along with the schemes of modern science.

Keywords

Religious ethics, environment (as a disciplinary field), Islam, modern science, concept of nature, environmental politics, Iran.

* I am very grateful to the colleagues and friends in Iran who took time from their busy days to talk with me. Funding for the research came from Grants-in-Aid for Scientific Research (Japan Society for the Promotion of Science) and Kyushu University. I am also very grateful to three JSBNC anonymous reviewers and Bron

Taylor for their thoughtful comments.
